

CLAIMS

1 1. A combination bottle and toothbrush holder comprising:
2 an elongated body having a top opening and an outer
3 symmetrical profile and an elongated integral recess, the recess having wall
4 means forming a liquid-tight enclosure such that a liquid contained in the body
5 will not pass through the recess of the bottle;
6 a cap threadably mounted on the top opening of the body;
7 a cylindrical case receivable in said recess;
8 a toothbrush and a tube of toothpaste received in the
9 cylindrical case;
10 the case being receivable in the recess to a stored position
11 in which the outside surface of the case forms a continuation of the profile of the
12 body; and
13 means for releasably holding the case in the recess.

1 2. A combination as defined in claim 1, including a cap for the
2 cylindrical case, slidably received over an upper end of the case.

1 3. A combination as defined in claim 1, in which a length of tape is
2 adhesively attached to the container on opposite sides of the recess.

1 4. A combination as defined in claim 1, in which the toothbrush has an
2 elongated hollow body, a handle with a brush receivable in said hollow body such

3 that the handle is movable between a stored position and an extended position;
4 and
5 means for holding the handle in said extended position.

1 5. A combination as defined in claim 1, in which the container has a
2 second recess, and the case has a finger resiliently received in said second
3 recess.

1 6. A combination as defined in claim 1, including a razor storable in
2 said case.

1 7. A combination as defined in claim 1, including a second cap
2 threadably on the case, the second cap being threadably mountable on the top
3 opening of the body when the first mentioned cap has been separated from said
4 top opening.

1 8. A combination as defined in claim 7, in which the body has resilient
2 walls, and including a spout on the second cap for removing a legend from said
3 body when the second cap is mounted on the body.
